Summery

Skilled Front-End Developer with expertise in JavaScript and TypeScript, React, Next.js, and Redux, dedicated to building high-performance web applications. Proficient in crafting clean, modular components and leveraging modern tools like TailwindCSS for styling, alongside UI libraries such as Material UI and Shadcn to deliver polished, responsive interfaces. Passionate about optimization, I prioritize fast load times, efficient state management, and scalable code architecture to ensure seamless user experiences.

Skills

- **JavaScript & Frameworks:** JavaScript, TypeScript, React JS, Next JS
- **Styling:** HTML, CSS, Tailwind CSS, Styled Components, Material UI, ShadCn
- **Tools & Libraries:** Git/GitHub, Framer motion, Redux, Context API, Restful API
- **Optimization:** SSR, SSG, Code Splitting, Memoization
- **State Management:** Context API, Redux

Projects

- **Pizzateria (Online order platform): [Pizzateria](#)**

  Pizzateria is a dynamic Single Page Application (SPA) designed to provide a seamless online pizza ordering experience. Built with React and Redux Toolkit, this application offers a responsive and user-friendly interface, allowing customers to easily navigate through the pizza menu, manage their orders, and track their delivery status.

- **Portfolio (Full-stack): [Portfolio](#)**

  built with TypeScript, React, and Next.js for robust performance and scalability. Smooth animations powered by Framer Motion enhance user engagement, while Aeternity UI and Radix UI deliver clean, accessible components. Styled with Tailwind CSS and clsx for dynamic layouts, and integrated with EmailJS for seamless communication. Every line of code prioritizes speed, clarity, and a polished user experience.

- **Crypto Bluedia (Full-stack platform): [CryptoBluedia](#)**

  Developed a high-performance web app using TypeScript, React, and Next.js, optimized via SSR/SSG, code splitting, and caching. Styled with Tailwind CSS and enhanced with Magic-UI/Aceternity-UI for dynamic animations and components. Features real-time crypto market tracking, portfolio analytics, and trend visualization. Built as a scalable startup to simplify crypto engagement with intuitive UX and SEO-ready architecture.

- **Tasky-done (To-Do app): [TaskyDone](#)**

  Pure JavaScript web app, developed a minimalist task manager with add/edit/delete functionality, user profile customization, and automated daily task updates. Styled with Tailwind CSS for a clean interface and integrated local storage for persistent data retention. Focused on intuitive UX to streamline productivity.
